The most powerful single common denominator among all the happy, healthy millionaires I have interviewed is the fact that they are financially successful. Most people who live below their financial means consider themselves to be successful financially. In reality, they are setting themselves up for failure because they are not achieving their own personal goals. Financial success means having a certain amount of money, which is why they constantly set themselves up for failure. Rich people are better off, happier and better principles, in the lives that they lead with others. They have more influence and power. They are more confident and self-sufficient. They have greater opportunities and access to resources. They are more likely to achieve their goals and dreams. They are more likely to achieve a good education, make a successful career, have a happy family, and live a fulfilling life. Financial success also means having the ability to help others, to support others, to give to others, and to make a difference in the world.

In the year 1900, there were about 2000 millionaires in the United States, and at that time the average millionaire’s net worth was about $35 million. Today, there are about 7 million millionaires in the United States, and at that time the average millionaire’s net worth was about $400 million.
