Horror-sopes not Horoscopes

Towadays, for anything that people want, they want to look at the planets and stars. If we want to step out of your house, the planets should align themselves properly. People are not looking at the right time, the wrong time, rubahkalam, ga- nukalam and other things. If they want to get married, they go and ask for a horo- scope, "I can live happily with my wife?" And they say, I will tell you all about how the planets are interacting and you will get married or you will not get married. Should insensitive things de- cide the destiny of a human crea- ture or should human nature decide that? We have no business doing any insensitive things! Destiny is in your own hands. How should that decide? If planets are deciding that you have to have a particular destiny, it means your human nature is not functioning. You are not functioning to the level of your human nature. You are functioning to the level of the planets.

If your intelligence is functioning, nobody can predict what you will do tomorrow and how you will live your life. Can nobody predict what an intelligent man will do tomorrow? No, because he may do something that has never happened on the planet.

Sixthpara jagya Vasudev

If your intelligence is functioning, nobody can predict what you will do tomorrow and how you will live your life. Can nobody predict what an intelligent man will do tomorrow? No, because he may do something that has never happened on the planet.

The planet. All your predic- tions are telling you that something that has happened. He may do something that you have never even imagined. If any human nature is like that, he can be wintered before he lives it, that is for no reason. Hororo-

So there is nothing to it? To say that this is happening because human beings are suggestible. So this is the full moon day and new moon day a person's destiny is decided. Instead of psychological aliment, he becomes a man's destiny. What is the real thing? What is real. On those days, do we all go on full moon days and new moon days? No, because it is not really a part of man. You are a little more little more something. You have no idea. Similarly, if you are truly awake, you know that every person go wherever it wants to go, you want to go to Suriname you will go to Suriname. Human should decide the course of your life. The source of cre- ation, which is functioning within you, if that cannot decide the course of your destiny, but planets—insensi- tive objects—decide that something is wrong. If you are little more little more within you, all these things are not happening. You will go where you want to.

When anybody says，“I am from this planet,” what it means is, it does not mean this is a part of the human nature. It just means something, who your fa- ther is, mother is, what are your parents doing, what is your karma is, what the planets, the sun is doing, I will go if I want, I am going wherever I want, I am going toward a different direction. That is what original- ity means. Originality means going toward your own destiny.
